

MERRELL 

Let'sGetOutside

SUMMER 2008 - FUSION

Merrell believes in continuously expanding the outdoor journey of discovery and freedom. Being outside brings us adventure and exhilaration, as well as self-knowledge and fulfillment. It blurs the boundaries between people and cultures, uniting those who enjoy exploring and seeking out new experiences.

Merrell believes in encouraging and equipping everyone to get outside. It doesn't need to be complicated – outside is where you will find it. Whether encompassing the wonder of the natural world or the heart of an urban landscape, it's the journey that spurs us on, serving as the inspiration for everything we do.

OUTVENTURE

Outventure is the natural heart and soul of Merrell – the inspiration for every new Merrell innovation, technology, and product design. Incorporating logical function, durable construction, and design-driven style, Outventure is for everyone who wants to get outside and push their limits every chance they get.

FUSION

Fusion represents the dynamic interaction of life, work, play and the ability to seamlessly transition between all of your destinations. Stylish and smart design built on the same foundation of comfort, performance and fit as all Merrell products, Fusion takes you across town or around the world.

MATERIALS AND CARE

Let'sGetOutside™

Leathers & Mesh

Full-Grain Leather

The outer surface of the leather, usually the strongest, most expensive part of the hide, can be smooth, shiny, or textured, and responds well to various waterproofing agents. While subject to nicks and abrasions, its general thickness and tight-knit fibers give it durability. Also referred to as a top-grain leather.

Pittards® Leather

A brand of premium top grain leather, Merrell uses a grade of Pittards leather (WR100) that is water-resistant and highly breathable.

Nubuck Leather

Full-grain leather that has been buffed to reduce irregularities in the hide. Responds well to embossing, pressing and various waterproofing agents. Waterproofing nubuck leather will usually result in a darker appearance.

Split Leather

Literally, the split side of the hide. Split leather is extremely durable due to the abrasion-resistant rough exterior. It's also the most affordable leather available. Split leather can be oiled, waxed and buffed (suede) to improve appearance and water resistance. Slightly looser fibers than full grain provide a softer feel.

Pigskin Leather

Wolverine® Performance™ Leather (pigskin) is ideally suited for unique coloring. Pigskin leather is treated with leather protectors during the retanning and coloring process, offering superior performance against water and stains.

Reverse Full Grain Leather

Same as full grain, but inside out. The strongest, most durable leather due to its rough abrasion-resistant exterior and inherent thickness.

Aerospace Mesh

The Air Mesh used in the Primo Breeze mocs and slides is 100 percent polyester. It may be treated with a stain repellent prior to wearing but for most debris and dirt this is not necessary. The mesh can be cleaned with either a stiff brush or soft cloth using mild soap and warm water for spot cleaning. Let shoes air dry away from heat.

Cleaning and Conditioning

Materials Beyond cosmetic appeal, the type of leather used in hiking boot and casual footwear manufacturing has a strong effect on waterproof capability, durability and affordability.

Care Properly cared for, a pair of hiking boots will last for years. Common mistakes many backpackers make is to dry their boots next to a hot campfire which can crack the leather. Also damaging is storing boots in damp locations. In general, to care for your boots, there are three steps to follow: cleaning, drying and conditioning

Cleaning On a regular basis, brush away surface dirt with a soft brush. After extended, rugged use, wash with mild soap and warm water. Be sure to rinse all soap off as it is hydrophilic.

Drying Open boot fully, remove footbed and laces and dry at room temperature. Never expose to heat!

Conditioning Recommended treatment depends on construction and materials of boot (most treatments do alter the color and appearance of boots).

Top Grain Leather NikWax®, Aqueous® and Leather Waterproofing Gel.

Nubuck or Split Grain Leather NikWax® for suede/nubuck.

Fabric / Leather Treat leather areas in a similar fashion to treating all leather boots. Treat fabric areas with Scotchgard® or NikWax® Fabric/Leather.

Pigskin Leather Because Wolverine® Performance™ Leather (pigskin) is treated against water and stains, leather conditioning is not necessary.

Pittards® Leather (WR100) Because waterproofing is inherent in the leather itself, do not treat WR100 with any waterproofing agents. Remove excess mud/dirt and dry naturally.

Shearling Clean shearling with Sheepskin Cleaner

BROWN MOSS

MANTRA

This slip-on sandal has sleek-looking full-grain leather uppers and luxurious pigskin leather lining. The cornerstitching is extremely flexible, keeping your feet relaxed and feeling fresh. Foot odor is also a thing of the past, thanks to the Aegis™ antimicrobial treatment. Slip into comfort with the City-XY™ microfiber-wrapped and EVA compression-molded footbeds. A nylon injection-molded arch shank supports your stride and the Air Cushion® midsole absorbs shock. The pebble-patterned Somato™ outsoles give these sandals a distinctive look and gripping traction.

Men's Sizes: 7-15 (Full Sizes Only)
